KNOW THE WEATHER

By E. H. Sims

Is it true that the best cooks cook by the weather?

Yes, there is scientific basis for cooking by the weather. Experienced chefs know that there are certain cakes and icings which cannot be satisfactorily made in rainy weather.

Cakes fall and icings turn out too grainy. Certain candies, like pralines, do not become creamy. This is due to the great amount of moisture in the air, which is picked up by the ingredients.

Because moisture has such a great effect on certain kitchen products many recipes are varied—are slightly different in the dry western states from those recommended in the other states, proof that the weather has a considerable effect on cooking.

U. S. is held pricing itself out of world market.

Health and Beauty

It is interesting that lack of physical exercise is being blamed as a contributing cause of heart attacks. Doctors are urging more but wise activity for health before a heart attack. After an attack, one must follow, to the letter, his doctor's instructions.

Some doctors tell us that an all-embracing philosophy of both physical and mental take-it-easyism deprives human lives of most of its higher values and incentives. It leads to unimaginative boredom and breeds addiction to cheap entertainment and to various commercially available substitutes for mental stability and spiritual creativeness.

Stress and worry are outstanding in the causes leading to heart attacks and other ailments contributing to heart trouble. They play a major role in atherosclerosis. Atherosclerosis means a fattening and narrowing of arteries and many experts think it is related to the amount of cholesterol in the blood.

Tests have proved beyond a doubt that healthy students during an exam have more cholesterol in their blood than normally, and so do business executives who are under extreme tension and pressure.
